ENERGY USAGE DATA SYSTEM (EUDS)

Objective: In June 2008, ComEd introduced a portfolio of initiatives under the *Smart Ideas* program banner to promote energy efficiency. Among them was the Energy Usage Data System (EUDS), an enterprise Web application that empowered ComEd customers to manage the end-to-end process of energy usage data requests.

Description: ComEd developed EUDS in response to increasing requests by commercial building management companies looking for ways to benchmark and understand their energy usage against similar buildings. In June 2008, ComEd designed and implemented the Energy Usage Data System (EUDS) to automate the management of all new energy usage requests. Shortly after its launch, the system was linked to ENERGY STAR Portfolio Manager, which is considered the best online Web-based tool available to gather and analyze building information.

Key Results: Since its implementation in June 2008, Energy Usage Data System (EUDS) has experienced a 935 percent growth rate in building enrollments. Today, 260 building managers have made more than 2,900 requests for over 8,900 months of energy usage data.
